This clarification consists of 1 page:

1. Please confirm that the existing Angle Stops are Threaded and not Compression style.

   Response: The angle stops are threaded.

2. When removing existing Threaded Angle stops, there is a possibility that the nipple would come out with the angle stop. If that happens, we would have to replace the nipple, however there would be no way to verify the threaded connection of the nipple (the connection would be in wall). This leaves the possibility for a slow leak within the wall cavity.

   Please advise what the method would be to eliminate the risk of a bad, in wall, connection with threaded nipple.

   Response: Yes, sometimes the nipple will have to be replaced.
